

## Press Release

---

**Date: 18<sup>th</sup> August 2011**

### **PASPAMPRES deploys ThruVision Systems' people screening technology**

ThruVision Systems is pleased to announce that the Indonesian Presidential Security Force, Pasukan Pengamanan Presiden ("PASPAMPRES"), is using its advanced concealed object detection systems.

PASPAMPRES is responsible for the safety and security of the Indonesian President and Vice President, as well as visiting heads of state. The Detection Detachment of PASPAMPRES has deployed ThruVision Systems' industry leading solutions since early 2011. Its security products are being used to screen people in real time for concealed threats, metal and non-metal, over a range of distances. In country after sales support is provided by ThruVision Systems' local partner PT Inspiration Electrindo.

The Commander of the Detection Detachment of PASPAMPRES, stated "ThruVision Systems' screening equipment provides enhanced security through unrivalled detection performance and operational flexibility. The stand-off imaging capability and the compact size of the system allow us to screen people for threats in a variety of security operations, indoors and out".

"We are very pleased to be working with PASPAMPRES" said Mr. Clive Beattie, ThruVision Systems' Chief Executive Officer, adding "our equipment is being used effectively by this elite security force, underlining our position as the market leader in stand-off people screening systems".

## **Notes to Editors**

### **About ThruVision Systems**

ThruVision Systems Ltd is a manufacturer of security screening products that incorporate proprietary passive terahertz imaging technology to detect person borne concealed objects. ThruVision Systems is based near Oxford, UK. Its security screening products are deployed in various locations in Europe, North America and the Middle East and Asia Pacific regions. Installations have included airports, border checkpoints, entrances to public buildings, shopping malls, sporting events, military applications, police deployments and VIP protection.

### **Technology background**

All ThruVision Systems' products are passive. Images of concealed objects on people are formed by receiving low energy waves known as terahertz waves. Terahertz waves occupy part of the electromagnetic spectrum between radio waves and infra-red (heat). Terahertz waves are naturally produced all of the time by all objects and people. ThruVision Systems' products only receive, they do not transmit. ThruVision Systems' products do not illuminate people with any radiation such as X-rays or millimetre wave microwaves. The products provide imaging solutions for real time use on people either close by or at distance, indoors and out. For further information go to [www.thruvision.com](http://www.thruvision.com)
